NFL DIVISIONAL PREVIEW

10,000 Monte Carlo simulations using ELO ratings.

Seattle enters with a 212-point ELO climb—the largest of any playoff team. But seeding doesn't match strength: both 3-seeds are favored over their 2-seed opponents.

Championship equity = probability of winning the Super Bowl from current position.

What the ELO Says

Seattle's rise is historic. From 1578 to 1790—a 212-point jump. They started as a borderline playoff team and finished as the field's best.

Buffalo stayed flat. Started strong (1734), ended at 1737. No improvement despite 12 wins.

New England's quiet surge. Up 134 points from 1547 to 1681. The biggest AFC mover.

The 3-seeds are better than the 2-seeds. Rams (1747) > Bears (1674). Texans (1744) > Patriots (1681). Seeding lies.

The 1-seeds control their destiny. Seattle is favored in either NFCCG matchup (61.6% vs LAR, 70.7% vs CHI). Denver is favored in either AFCCG (66.6% vs NE, 57.3% vs HOU). Win this weekend, and the path to the Super Bowl opens wide.

Seattle is the team to beat. Highest ELO (1790), biggest improvement (+212), widest championship path (36.3% if they win Saturday).

NE vs HOU is the swing game. A true coin flip (51.7% vs 48.3%) that determines whether Denver faces a weaker or stronger AFCCG opponent.

Don't trust the seeds. Both 2-seeds (Bears, Patriots) are underdogs despite home field. The model sees what the committee missed.
